

# Reduce, Reuse, Recycle Resources

By National Veterinary Services Limited

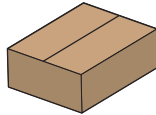

## Reduce, Reuse, Recycle

- Reduce packaging by encouraging customers to use our returnable totes
- Reuse clean packaging from suppliers and customers
- Recycle non-reusable packaging collected from suppliers or collected from customers and suppliers

Air fill pockets and cardboard cartons are reusable and made from recyclable materials.

## NVS recycles over 380 tonnes of packaging annually

- 352 tonnes of cardboard
- 28 tonnes of plastic

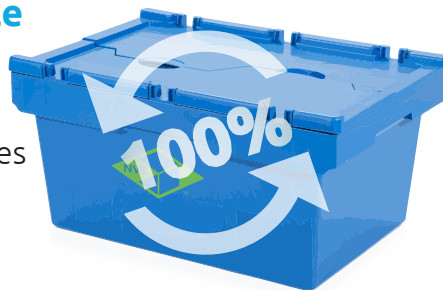

## NWL Terracycle Zero Waste box programme

PPE such as vinyl, nitrile and latex gloves are recycled by Nationwide Laboratories through the Terracycle Zero Waste box programme.

## Did you know, our reusable Blue Tote Boxes are made of 100% recyclable material

Please help us by returning tote boxes with your delivery driver.

## NWL Donations

Nationwide Laboratories donate old laboratory equipment, such as microscopes, to schools rather than disposing of them in landfill.

## Batteries

NVSL collect and recycle batteries with our compliance partner European Recycling Platform (ERP). Order a recycling box and hand it to your driver when full.

## Hazardous Waste

Special care is taken when working with hazardous waste, NVSL complies with all legislation to ensure waste is safely stored and disposed of.

## Energy Consumption

Reducing the impact of our operations by managing energy consumption through efficient use of energy and other resources. Including motion sensor LED lighting in our premises where possible.

## Electrical Equipment

NVSL recycles unwanted electrical and electronic equipment through a partnership with CRC (The Community Recycling Consortium). Money raised by CRC helps aid training and employment of people with physical disabilities and mental health issues.

## Our Distribution Network

NVSL aims to make the delivery network as environmentally efficient as possible, through regular reviews of routes to reduce miles and traffic monitoring. Our entire fleet meets the latest EU Emissions standards (EuroVI/EU6). Where feasible, we will invest in alternative fuel technology to reduce the reliance on fossil fuels.

## Reducing Landfill

Our non-recyclable plastics are sent to an energy recovery facility and are used for electricity generation – thus avoiding landfill.
