

Sterilisation

“95% of practices use sterilisation pouches”

Self Seal Sterilisation Pouches

Our pouches feature an adhesive strip which by removing the backing and folding over creates a validated seal that will withstand sterilisation.

Complete with off-set webs for easy opening and tack seals to prevent curling and reduce the risk of external contamination.

Printed with type 1 process indicators, our pouches are manufactured from medical grade 60gsm paper and 2ply blue tinted film that is suitable for both steam and EO sterilisation systems.

For more information visit the Decontamination & Sterilisation area on www.nvsweb.co.uk
